

TILT PANEL DOOR

A tilt panel door offers the ultimate solution for an architectural build or to maximise the impression of your houses' façade. The door is comprised of one panel fitted with pivoting arms at both sides of the opening which tilts the door from a vertical, closed position to a horizontal, open position. Offering the perfect solution for garages with restricted side or head room. A tilt door also offers the widest variety of cladding options to complement the design of any building.*

A standard frame is manufactured from galvanised steel and built specifically with the cladding fixing and weight in mind. Door Smart WA can install the frame with or without the cladding to suit any specific project needs.

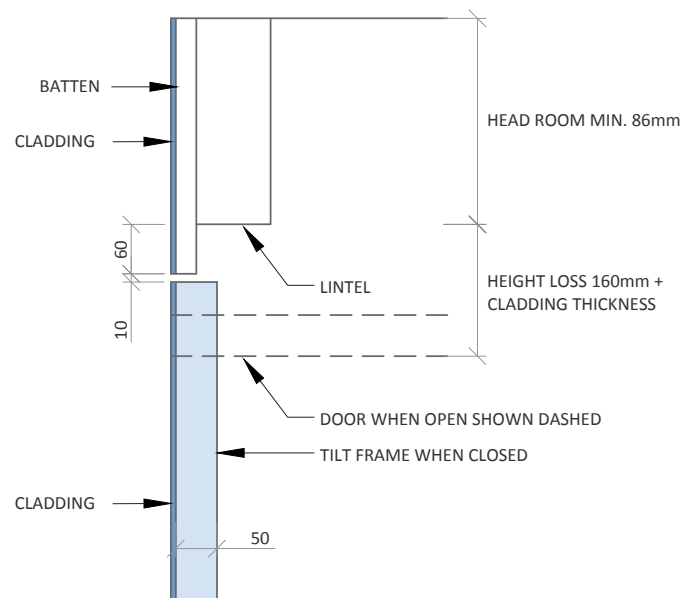

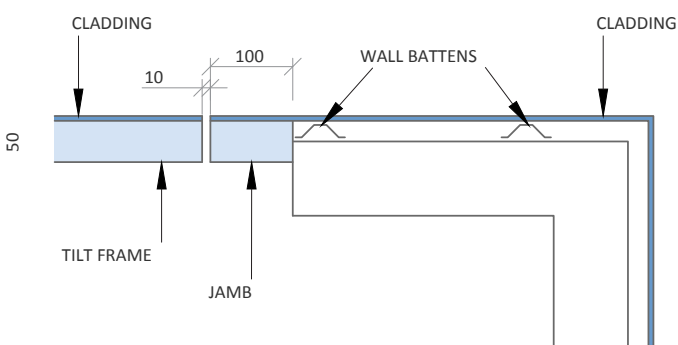

MAX DOOR SIZE

2.7m high x 6m wide *

CLADDING WEIGHT PER M²

5-12kg per m² *

INSTALL DIAGRAM

Note: Diagram depicts flush finish door.
